Islamic Global Responsible Equity Fund

I Class November 2025

Market Review

Sharp selloffs and recovery rallies highlighted a volatile November period though the month closed with rather mixed and muted equity results overall.

The longest United States government shutdown in history finally concluded on November 12th lasting 43 days. The shutdown resulted in the furlough of roughly 900,000 federal employees and kept another two million working without pay. It was a welcomed resolution as we head into the highly active holiday season. The ending of the shutdown also allowed for economic data releases, an important step in determining next steps for the Federal Reserve (Fed).

The September jobs report showed a very robust 119,000 gain in payrolls, topping all consensus expectations and pointing to a rebound following August's revised contraction. Concerns about the labor market under pressure have swelled since the summer, especially as alternative labor market data and company anecdotes have both pointed to a surge in layoffs. Nevertheless, today's strong headline number, combined with initial jobless claims that remain contained, helps push back against these concerns and point to a decelerating, but not yet cratering, labor market.

Peace talks on the Russia and Ukraine war resurfaced towards the end of the period. U.S. Special Envoy Steve Witkoff is set to travel to Russia first week of December and is due to meet Russian President Vladimir Putin for discussions on a U.S.-backed 19-point peace plan. Ukraine has tentatively supported the peace proposals, putting the ball back in Russia's court as to whether it too can work with the framework agreement. More to come in this delicate process.

To conclude, the November period brought lots of volatility though ended with rather lackluster returns. The S&P 500 was up modestly by 0.25%, while the MSCI EM Index was down by 2.4%. The MSCI Europe Index was up by 1.5%, while the MSCI Japan Index was down by 0.7%.

Fund Review

The portfolio posted a negative absolute return of 0.5% in the month of November while outperforming its respective index. From a sector perspective, the communication services and health care sectors were places of modest strength while were more than offset by weakness in IT and materials. The United States and the United Kingdom were top contributors from a country perspective while South Korea and the Netherlands lagged overall.

Portfolio Outlook and Strategy

The adage "stocks follow earnings" has never been truer than in recent years, particularly during a decade characterized by American exceptionalism. U.S. stocks have outperformed global counterparts, buoyed by superior free cash flow, earnings growth, and higher valuation multiples. Yet this period, driven by innovation and supportive policies, now raises the question: Is it time for this exceptionalism to normalize? The answer appears to be yes, as U.S. valuations have declined while ex-U.S. valuations have closed the gap in 2025.

U.S. earnings growth and valuation multiples reached extraordinary levels, largely fueled by innovation that has significantly favored mega-cap companies. In contrast, regions like Europe have struggled to secure a foothold in the digital economy, resulting in a stark earnings divergence—U.S. earnings per share (EPS) have doubled those of developed markets over the past decade.

Two key developments are necessary for Europe and emerging markets to sustain this shift in fortunes. First, both regions must reignite growth through domestic initiatives, as protectionism threatens global trade. Second, U.S. earnings growth must slow to align more closely with international trends.

The first development is underway. The “America First” policies have inadvertently prompted other nations to focus on internal development in pursuit of economic growth. This shift could foster a more conducive environment for local businesses. A prime example is Germany’s renewed commitment to invest in physical and digital infrastructure to stimulate short-term economic growth and enhance Berlin’s long-term competitiveness.

As for the second point, U.S. earnings growth may slow if the Magnificent Seven mean-revert to their long-term averages in their fundamentals. Looking at the earnings growth of the bottom 490 stocks, they are far more pedestrian. That is, without the top S&P 500 names, the earnings growth of the U.S. would look quite like the rest of the world. In fact, earnings estimates globally show a similar expected growth rate in 2026 in every region. Should that come to pass, the valuation gap should close.

Yet, thanks to the trade war launched by the Trump Administration, European leaders are taking steps to bolster their economies. Leading this effort is Germany, which unveiled a 500-billion-euro stimulus package, signaling an end to decades of budget austerity as it focuses on military and infrastructure investment. If pronouncements translate into concrete steps, the current trade friction could become a long-term positive gamechanger for Europe’s economies.

Over the past decade, Japanese companies have made great strides in corporate governance and capital allocation. Former Prime Minister Shinzo Abe’s push in 2012-13 to improve capital allocation in the corporate sector has had a lasting impact, driving more long-term, value-enhancing decisions by Japanese companies. Continued progress on these fronts is primed to release shareholder value in the coming years. As companies focus on higher profitability and improve balance sheet efficiency, return on assets (ROA) will likely continue to improve given the tailwinds of reshoring and improving governance. Recent conversations with Japanese companies indicate intentions to further use strong balance sheets for modest share buybacks.

The continuing pace of innovation is another reason for optimism, particularly in high-end computing and life-sciences. Innovation is growth stimulative and disinflationary due to its impact on productivity. Artificial Intelligence is early in its usage but offers great promise across many practical applications, including software development, finance and healthcare. The investment needed for AI deployment is historically massive and shows no signs of abating. In healthcare, new weight loss treatments offer the ability to systematically address one of the greatest co-morbidities. This should improve lifespans and result in a net reduction in societal healthcare costs. Continued therapeutic customization also continues to grow, offering additional measures to improve the quality of life.

Finally, there are still numerous challenges and persisting risks. However, the depressed valuations in these regions create attractive entry points for long-term investors in firms generating resilient economic returns. Both China and the U.K. are examples of countries facing longstanding economic structural challenges. It is not surprising that investors’ view companies domiciled in these markets with pessimism. Nevertheless, market pessimism seems extreme as many of these companies operate globally yet are beset with deeply discounted valuations relative to their own histories and global peers.

Within the U.S., despite labor demand eroding for much of the year, and following April’s Liberation Day selloff, the S&P 500 has reached record highs. The divergence between market strength and labor weakness has raised questions about the true underpinnings and sustainability of the market rally.

Behind challenged labor market headlines, underlying consumer and capex resilience remains a backbone of this year’s earnings strength. Additionally, business cycle leading indicators—ISM Services and regional manufacturing Fed surveys—have surprised to the upside in recent months. The broader picture of economic robustness, further supported by tight credit spreads, continues to underpin the strength in the equity market.

Looking ahead, the combination of monetary easing alongside fiscal and regulatory stimulus could bolster an economy that has proven resilient to this year’s headwinds. A policy-driven recovery may help revive the more sluggish segments of the economy, including housing, manufacturing, and employment, suggesting that equities, beyond the large tech leaders, could be poised for further modest gains.

As we dig into global equities, U.S. earnings growth and valuation multiples have reached extraordinary levels, largely fueled by innovation that has significantly favored mega-cap companies. In contrast, regions like Europe have struggled to secure a foothold in the digital economy, resulting in a stark earnings divergence.

Risk Considerations

Investing involves risk, including possible loss of principal. Past Performance does not guarantee future return. All financial investments involve an element of risk. Therefore, the value of the investment and the income from it will vary and the initial investment amount cannot be guaranteed.

Important Information

This material covers general information only and does not take account of any investor's investment objectives or financial situation and should not be construed as specific investment advice, a recommendation, or be relied on in any way as a guarantee, promise, forecast or prediction of future events regarding an investment or the markets in general. The opinions and predictions expressed are subject to change without prior notice. The information presented has been derived from sources believed to be accurate; however, we do not independently verify or guarantee its accuracy or validity. Any reference to a specific investment or security does not constitute a recommendation to buy, sell, or hold such investment or security, nor an indication that the investment manager or its affiliates has recommended a specific security for any client account. Subject to any contrary provisions of applicable law, the investment manager and its affiliates, and their officers, directors, employees, agents, disclaim any express or implied warranty of reliability or accuracy and any responsibility arising in any way (including by reason of negligence) for errors or omissions in the information or data provided.

This material may contain 'forward-looking' information that is not purely historical in nature and may include, among other things, projections and forecasts. There is no guarantee that any forecasts made will come to pass. Reliance upon information in this material is at the sole discretion of the reader.

The interest rate used is a general economic indicator that will have an impact on the management of the Fund regardless whether it is a Shariah-compliant Fund or otherwise. It does not in any way suggest that the Fund will invest in conventional financial instruments. All the investments carried out for the Fund are in accordance with Shariah requirements.

Proprietary model output is based upon certain assumptions that may change, are not guaranteed and should not be relied upon as a significant basis for an investment decision. Forecasts for each asset class can be conditional on economic scenarios; in the event a scenario comes to pass, actual returns could be significantly higher or lower than forecasted. Because of the inherent limitations of all models, potential investors should not rely exclusively on the model when making an investment decision. Forecasts of financial market trends that are based on current market conditions constitute our judgment and are subject to change without notice. Indices are unmanaged and do not consider fees, expenses and transaction costs are not available for direct investment. The information provided here is neither tax nor legal advice.
